

An Introduction to Business Process Management

BPM 101 is the foundational course for those starting their BPM journey. It presents an overview of process modeling, analysis, design and the technologies in BPM.

BPM 101 is a must for anyone who aspires to improve processes and overall business performance. It's designed for business leaders, business analysts, business architects, project managers and anyone involved in process improvement and the automation of process solutions. This course creates the foundation for all other courses in the BPM learning path and curriculum. It establishes a common language and the foundational knowledge for the other courses in the BPM curriculum.

BPM 101 is the cornerstone course of the BPM curriculum. It is especially useful for people new to BPM. It provides an overview of BPM as both a management discipline and as a set of enabling technologies and it establishes the foundation for the BPM courses that follow.

Participants will learn about the history of BPM, and the key concepts, terms, methodologies, techniques, and technologies in BPM. It equips participants with an overview of process modeling, analysis, and design and provides insight into the tools and technologies used to support the BPM discipline including process modeling tools and Business Process Management Suites (BPMS). You will learn about the practices and the technologies that are making business process management a much needed approach to solving business problems and improving performance. An overview of process modeling, analysis and process design principles forms the foundation of the course. Group discussions will be used to deepen the understanding of key concepts. You will also learn where to access tools and technologies as well as key resources in the BPM community.
